Technical Skills

Languages C++, Java (Basic), C#.

Technologies/Frameworks: Unity Engine, Unreal Engine, Blender for 3D Modeling.

Skills: C#, Blueprint Scripting (Unreal Engine Visual Scripting), Problem Solving, Engines: Unity (2D/ 3D), Unreal Engine, Blender 3D Modeling.

Projects

Rabit Rush 2D | using Unity Engine, C# scripting

Jan 2024 - Feb 2024

- I created a 2D arcade mobile game which is apk using Unity, where I designed and implemented unique 2D sprites for the obstacles, collectibles, and characters.
- In this Project, I mentioned OnCollisionEnter2D method that involves collisions with the carrots and stones in the game and highscore method which is store the highest score in the game.
- Implemented the joystick for player movements and intergraded the code to player script which moveable and collect the carrots in the game.
- GitHub Repository Link: <https://github.com/DeepakLingala/Rabit-Rush-2D>

Box Collider Game 3D | using Unity Engine, C# Scripting

Apr 2024 - May 2024

- Designed a 3D Box runner game in Unity, which passes through the obstacles and the environment contains foggy for the player interaction.
- The box speed will be increased by passing through the obstacles, using the method of Time.deltatime in the game, which represents the time in seconds it took to complete the last frame.
- The box always runs forward because using the AddForce method is used to apply physical forces to a Rigidbody component, causing it to accelerate and move in a realistic, physics-based manner.
- Using the SetActive method, the score can start or stop an entire Game Object within a scene.
- GitHub Repository Link: <https://github.com/DeepakLingala/BoxColliderGame>

FPS Shooter 3D | using Unreal Engine 5.2 version, Blueprints

Nov 2024 - Jan 2025

- Designed a First Person Shooter (FPS) game in Unreal Engine 5.2 using Blueprints (Visual Scripting) and the environment is full of forest which the player as to find the targets
- The player must shoot the targets within the time limit, if the player doesn't shoot the targets within the time limit the player will be out and it shows game over.
- Using the geometry projectile Physics the targets will broke and its shows realistic by shooting the targets the scores will added and by shooting its makes sounds which feels realistic.
- In this Project, we used chaos physics and followed the object-oriented programing blueprint (visual Scripting tool make the game interactive for the players.
- GitHub Repository Link: <https://github.com/DeepakLingala/FPS-Game-3D>

Certificates

Programming in Java (Basic)

Jan 2024 - April 2024

NPTEL — [Certificate Link](#)

Programming in C++

Jun 2024 - July 2024

Tenvanto Academy — [Certificate Link](#)

Education

Lovely Professional University Punjab

2023 – 2025

Master of Computer Applications

Jalandhar, Punjab

Kakinada Sri Aditya Degree College

2021 – 2023

Bachelor of Computer Applications

Srikakulam, Andhra Pradesh

Sri Chaitanya Junior College

2018 – 2020

12th with MPC (Math's, Physics, Chemistry)
