🐙 github.com/DeepakLingala 🌐 deepaklingala.github.io/Portfolio/

Summary

Game programmer specializing in Unity and C Sharp, building 2D/3D platformers with object-oriented architecture and reusable game design patterns. Engineered a custom NavMesh-based pathfinding system to drive navigation. Shipped two complete titles on itch.io—including Android ports—covering the full pipeline from prototype to public release.

Skills

Programming Languages: C#, C++, Java(Basic).

Game Engine: Unity Engine, Unity Editor Scripting, ScriptableObjects, Prefabs, Unity Package Manager (UPM) .

Gameplay Systems : Physics (Rigidbody, Colliders, Raycasting), Animator Controller, UI/UX (Unity UI, Canvas, TextMeshPro).

Tools: Git/Version Control, Blender(3D Modeling).

Core Concepts: Object-Oriented Programming (OOP), Design Patterns (Singleton, Observer, State, Factory, Object Pooling).

Projects

Rabit Rush 2D — Unity Engine, C Sharp 2025

- Designed and developed a 2D platformer game in Unity (C#) with **full Android build deployment**.
- Optimized character movement mechanics by integrating a third-party Joystick asset, improving control responsiveness and **increasing movement speed by 40%**.
- Implemented 2D Collider-based **interaction system for collectible mechanics** (carrots) and obstacle destruction triggers (stones), enhancing core gameplay logic.
- Published the game on itch.io, **achieving 23 downloads and 128 views** within in the first month of release.
- Game Download Link: <https://deepaklingala16.itch.io/rabitrush2d>.

Smash Cubrix — Unity Engine, C Sharp 2026

- Designed and developed an **endless runner 3D** cube game featuring **obstacle avoidance mechanics** and **time-based scoring system**.
- Created character **animations using Blender** and integrated them into **Unity**, resolving import pipeline bugs to achieve **100% functional animation implementation** .
- Engineered a **game pattern-based movement system** that increased player (cube) speed by **30%**, improving gameplay pacing and difficulty scaling.
- Built a **procedural ground spawner using Object Instantiation**, enabling dynamic **prefab-based level generation** with **50% improved efficiency** in ground generation.
- **Implemented a leaderboard system with player name input functionality**, storing and displaying high scores, improving **workflow accuracy and performance by 40%**.
- Game Download Link: <https://deepaklingala16.itch.io/smash-cubrix-3d>.

Certifications

- **Java Programming (Basic)** -- NPTEL (2024): Validated proficiency in Java and **object-oriented programming (OOP) fundamentals**, including classes, inheritance, and encapsulation.
- **C++ Programming (Summer Internship)** -- Techvanto Academy (2024): Applied C++ **fundamentals to build a console-based Tic-Tac-Toe game**, demonstrating logic building and program flow control.

Education

Master of Computer Application (MCA)
Bachelor of Computer Application (BCA)

Graduated: **2025** *Lovely Professional University*
Graduated: **2023** *Kakinada Sri Aditya Degree College*
